

What is claimed is:

1. A display system comprising:
a control computer having a source server module, an interface manager
5 and a user server module;
a display computer having a display server agent and a gateway host for communicating with said control computer; and
a video wall, coupled to said display computer.
- 10 2. The display system of claim 1, further comprising:
a source computer having a remote control agent and a gateway host for communicating with said control computer, wherein said source computer further having at least one data source that is accessible by said interface manager to be displayed on said video wall.
- 15 3. The display system of claim 1, further comprising:
a remote control computer having a remote manager and a gateway viewer for communicating with said control computer for accessing said interface manager of said control computer.
- 20 4. A display system comprising:
a manager computer having a source server module and a user server module;
a control station for communicating with said manager computer, said
25 control station having a plurality of displays; and
a source computer for communicating with said manager computer, wherein said source computer having at least one data source that is accessible by said source server module to be displayed on at least one of said displays of said control station.
- 30 5. A method for displaying a data source on a large scale display, said method comprising the steps of:

b) accessing said at least one data source from a source computer; and
c) causing said at least one data source to be displayed on said large scale display, wherein said large scale display is located remotely from said local control computer.
